Professional Summary

Full Stack Software Engineer with 5+ years of professional experience building and maintaining production software across frontend, backend, databases, and APIs. Experienced in developing end-to-end features using Django, Django REST Framework, React, JavaScript, TypeScript, and PostgreSQL. Strong background in REST API development, third-party integrations, asynchronous processing with Celery, Redis-backed systems, database development, and troubleshooting complex production issues across the stack. Experienced working with distributed teams and delivering production-ready solutions from requirements through implementation and release.

Technical Skills

Backend: Python, Django, Django REST Framework, REST APIs, Celery, Redis, PostgreSQL, PostGIS, GraphQL

Frontend: React, JavaScript (ES6+), TypeScript, Next.js, Redux, HTML5, CSS3, SCSS

Tools & Practices: Git, GitHub, GitLab, GitHub Actions, CI/CD, Postman, Jira, Agile, Webpack, Figma

Additional Technologies: React Native, Expo, Koa, Prisma, Nexus, Hasura, GraphQL

Experience

Willdom / Codium — Software Engineer Jun 2021 – Present
Develop and maintain production software for international and regional clients, contributing across backend services, APIs, databases, frontend applications, integrations, and deployment workflows.

Sword Sweeper — Alloy & Relay

Full Stack Engineer Mar 2026 – Present

- Develop and maintain end-to-end features across production applications using **Django, Django REST Framework, React, PostgreSQL, Celery, and Redis**.
- Resolve high-impact production issues by investigating and troubleshooting problems across backend services, APIs, asynchronous processes, data models, and frontend workflows.
- Integrate third-party systems and workflows, including synchronization between Alloy and **M-Files**, automating workflow status updates and task completion.
- Implement asynchronous background processing with **Celery**, including automated potential duplicate-contact detection triggered by contact creation and updates.
- Develop backend domain models, REST API behavior, and React workflows for complex business processes, reducing frontend complexity and improving maintainability.
- Refactored the notification architecture using the **Strategy Pattern**, enabling maintainable delivery through in-app, email, and SMS channels.
- Implemented end-to-end business workflows, including referral withdrawal functionality and improvements to case and referral domain relationships.

Environment: Python, Django, Django REST Framework, React, PostgreSQL, PostGIS, Celery, Redis, REST APIs, Webpack, SCSS

Learning Through Art — Books Alive For Kids

Software Engineer

Aug 2023 – Present

- Developed a **Django-based dashboard** to visualize user analytics and engagement metrics, providing stakeholders with actionable insights into application usage.
- Designed and built a **React administration portal** for managing book content and activity metadata, improving content management workflows and UI/UX.
- Investigated and resolved critical production bugs and performance bottlenecks across the application.
- Improved book download performance and application reliability, contributing to a better experience for children, educators, and administrators.

Environment: Django, Python, React, JavaScript, TypeScript, React Native

South Atlantic Packaging

Software Engineer

Jun 2021 – Jul 2023

- Built and maintained production web application features using **React, Next.js, and React Bootstrap**, supporting labor tracking and product promotion workflows.
- Developed and maintained backend data structures using **PostgreSQL**, including database scripts and stored procedures.
- Updated GraphQL schemas and backend data models using **Hasura**, supporting evolving application and business requirements.
- Integrated frontend applications with backend GraphQL APIs and database-driven workflows.

Environment: React, Next.js, JavaScript, PostgreSQL, Hasura, GraphQL, GitHub Actions, CI/CD

Selected Additional Project Experience

Outfit Training

Full Stack Software Engineer

Jun 2024 – Dec 2024

- Developed and maintained production features across web and mobile applications using TypeScript.
- Implemented backend functionality and APIs using **Koa, Prisma, Nexus, and GraphQL** to support workouts, trainers, and membership data.
- Delivered end-to-end features while collaborating with stakeholders and documenting releases and requirements in Jira.

Pvolve

Software Engineer

Jan 2025 – Nov 2025

- Led development of a marketing-focused acquisition widget integrated across landing pages and campaign-specific user flows.
- Integrated Meta and Google analytics to improve user behavior tracking and conversion visibility.
- Investigated and resolved high-impact production issues in customer-facing applications.

Education

National University of Asunción, Software Engineering

Feb 2018 – Dec 2022
